

Flow Monitors and Sensors

for intermittent and circulating centralized lubrication systems

Flow monitor

Flow monitors/sensors have the task of monitoring the flow of oil from the pump or a piston distributor element to the lube point. Flow monitors with various designs are used for this job. A further task involves monitoring a continuous flow of oil from a pump through a lubrication system. These flow monitors are designed for a throughput ranging from 0,5 cm³ to 14000 cm³.

Flow sensor

Flow sensors keep an eye on the flow of oil from a metering point to the lube point, the metering point metering out a small amount of oil for only a short period of time.

Depending on the type, flow sensors can monitor oil quantities ranging from 10 mm³ all the way to 600 mm³ per lubricant pulse.

Oil-streak sensor

The oil-streak sensors monitor the continuity of the oil flow in oil+air systems.

So the following points have to be observed when selecting an appropriate monitoring device:

- intermittent or continuous operation
- kind of lubrication system
- oil quantity to be monitored
- eff. viscosity of the lubricant
- system pressure.

Overview flow monitors and -sensors

Please have a look at the important product usage information on the back cover of the brochure.

Designation	Order No.	Metered quantity flow rate	Application	Port A	Port B	Fig..	Page
Flow monitor	171-100-011	0,2 – 1,5 cm ³ /pass	Intermittend totalloss lubrication systems	M10×1	M18×1,5	1	2
Flow monitor	171-210-051	50 – 100	Circulating centralized lubrication systems	M10×1	M18×1,5	2	3
	171-210-052	100 – 200					
	171-210-053	200 – 500 cm ³ /min					
	171-210-054	500 – 800					
	171-210-055	800 – 1800					
Flow monitor	171-210-061	1,6 – 2,5	Circulating centralized lubrication systems	M18×1,5	M18×1,5	3	3
	171-210-062	2,3 – 4,0					
	171-210-063	3,6 – 6,0 l/min					
	171-210-064	5,5 – 10,0					
	171-210-065	8,0 – 14,0					
Flow sensor	GS300 GS304N GS304P	10 – 600 mm ³ /Impuls	Intermittend centralized lubrication systems, e.g. with piston distributors, metering elements, injection oilers, Oil+air centralized lubrication systems			4	8

Please note: See leaflet 1-1730-EN for associated line sockets.

Flow monitors for monitoring of an intermittend flow of oil

Totalloss lubrication systems

Fig. 1

Note: See application I, page 4.

1) Port tapped for cutting-sleeve screw union EO-2 DIN 2353 / ISO 8434-1
 2) DIN 2353 / ISO 8434-1. Only permissible for the use of preassembled fittings. We recommend use of a preassembled EO-2 screw union. (Example: GA21...23/GA30)

Technical data

Number of cycles max. 2/min³⁾
 Operating viscosity 20-750 mm²/s
 Actuating pressure min. 4 bars⁴⁾ max. 30 bars
 Electr. switching changeover 250 V AC, 0,5 A
 Type of enclosure IP 44
 Mounting position any

Materials:

Housing die-cast zinc, polyamide
 Seals NBR (FKM version on request)

³⁾ Suitable for medial operating viscosity. In case of higher viscosity decreases the number of cycles.

⁴⁾ In single line centralized lubrication systems the main line needs to have before the distributors a pressure of at least 14 bars.

Order No.	Flow rate
171-100-011	0,2 – 1,5 cm ³ /pass

Flow monitors for the monitoring of a continuous flow of oil circulating lubrication systems with 50 bis 1800 cm³/min or 1,6 bis 14 l/min

Fig. 2

Note: See application II + III on page 4 + 5.

Technical data

Operating viscosity 20 – 1000 mm²/s
 Actuating pressure min. 4 bars ³⁾, max. 25 bars
 Electr. switching changeover 250 V AC, 0,5 A
 Perm. operating temperature ... + 5 bis +80 °C
 Type of enclosure IP 65
 Mounting position any

Materials:

Housing die-cast zinc, polyamide
 Seals NBR (FKM version on request)

³⁾ If the flow monitors are equipped with metering restrictors, at least 6 bars are required in the feed line

Order No. (Fig. 2)

Flow rate

171-210-051	50 – 100
171-210-052	100 – 200
171-210-053	200 – 500 cm ³ /min
171-210-054	500 – 800
171-210-055	800 – 1800

Fig. 3

Note: See application IV, page 5.

Order No. (Fig. 3)

Flow rate

171-210-061	1,6 – 2,5
171-210-062	2,3 – 4,0
171-210-063	3,6 – 6,0 l/min
171-210-064	5,5 – 10,0
171-210-065	8,0 – 14,0

¹⁾ Port tapped for cutting-sleeve screw union E0-2 DIN 2353 / ISO 8434-1
²⁾ DIN 2353 / ISO 8434-1. Only permissible for the use of preassembled fittings.
 We recommend use of a preassembled E0-2 screw union.
 (Example: GA21...23/GA30)

(flow monitor as per Fig. 2, page 3)

Tube union ²⁾
for direct connection to the flow monitor

Connection	for tubing diam.	Function nut order No.
A4	12	460-212-001

¹⁾ Port tapped for solderless tube connection

²⁾ Port tapped for solderless cutting-sleeve screw union to DIN 2353

Connection

A3

The required restrictor sizes are determined with the nomograph on page 6

Connection

A4

Nomograph for determination of restrictor sizes

(connection A3, system example III)

Determining the restrictor size

1. Draw a straight line along the index lines through point **Q** v effective.
2. Determine the point at which **p** intersects with this line, resulting in **D**.
3. Select the restrictor **closest** to point **D**.

D must be inside the white field, that means small amounts cannot be "apportioned and monitored" with the unit.

Example 1:

required: $Q = 36 \text{ cm}^3/\text{min}$,
 given: $v \text{ eff.} = 280 \text{ mm}^2/\text{s}$
 $p = 7 \text{ bars}$
 Result: restrictor size No. 60
 (borderline case)

Example 2:

required: $Q = 260 \text{ cm}^3/\text{min}$,
 given: $v \text{ eff.} = 480 \text{ mm}^2/\text{s}$
 $p = 8 \text{ bars}$
 Result: restrictor size No. 80

Flow rate at activation point as a factor of the viscosity

Flow monitors to monitor a flow of oil (circulating lubrication system)

Order No.	Flow rate activation point [cm ³ /min]	Actuation curve as per diagram

171-210-053	150	③
171-210-054	400	④
171-210-055	700	⑤

Order No.	Flow rate activation point [l/min]	Actuation curve as per diagram
171-210-061	1.3	①
171-210-062	1.9	②
171-210-063	3.0	③
171-210-064	4.5	④
171-210-065	6.5	⑤

GS300, GS304N, GS304P

Flow sensors for monitoring of lubricant feedright at the lube point

Fig. 4

1) Port tapped for solderless 4 mm diam. tube connection

2) Accessories
 GS300: 5 m connection cable, order No. GS200.U4
 GS304P / GS304N: 5 m connection cable with straight line socket, 4-pole type, order No. DS-E.U2

Technical data

- Measuring principle calorimetric
- Suitable metered quantities from 0.01 to 0.6 cm³/pulse
- Clock frequency³⁾ max. 4 pulse/min
- Lubricant oil (10 to 2000 mm²/s)
- Max. operating pressure 40 bars
- Operating temperature +10 °C to +50 °C
- Installation directly upstream of lube point
- Vibration resistance 20 g (DIN/IEC 68-2-27, 10-2000 Hz)
- Impact resistance 50 g (DIN/IEC 68-2-27, 11 ms)

3) Sensor needs 30 sec. of warmup time.

Electrical data

- Rated voltage U_N 24 V DC
- Residual ripple 10 %
- Working range U_A 18 to 30 V DC
- Max. power consumption I_E 25 mA
- Pulse output 3 s
- Load current I_A for GS300 max. 10 mA
- for GS304. max. 500 mA per output
- Output protection short-circuit protection
- Built-in plug circular connector with M12x1 screw plug

Order No.	Switching function	Electrical connection
GS300	<p>Pin 1 (BN - brown): + 24 V Pin 3 (BU - blue): 0 V Pin 4 (BK - black): PNP/NO – closes in event of flow</p>	
GS304P	<p>Pin 1 (BN - brown): + 24 V Pin 2 (WH - white): PNP/NC – opens in event of flow Pin 3 (BU - blue): 0 V Pin 4 (BK - black): PNP/NO – closes in event of flow</p>	
GS304N	<p>Pin 1 (BN - brown): + 24 V Pin 2 (WH - white): NPN/NC – opens in event of flow Pin 3 (BU - blue): 0 V Pin 4 (BK - black): NPN/NO – closes in event of flow</p>	

GS4011-S., GS6011-S..

The oil-streak sensors monitor the continuity of the oil flow in oil+air lubrication systems

So-called oil+air centralized lubrication systems are used to supply high-speed rolling bearings in tool spindles. The bearings are supposed to be supplied with extremely small quantities of lubricant (minimal-quantity lubrication) in the case of these applications. To achieve such small quantities of oil per unit of time, what was originally a relatively large drop of oil is torn apart by a current of air on its way from the metering point to the bearing. The oil to be delivered is fed in the line to the bearing as a thin flow of lubricant along the wall.

Monitoring:

So far, only the metered quantity of oil from the metering element has been checked upstream of the oil and air mixing point. The oil-streak sensor makes it possible to monitor the transport of a fine current of oil along the secondary line's wall downstream of the oil and air mixing point. The closer the sensor is located to the lube point, the more reliable the system monitoring.

Technical data

Measuring principle	optical
Fluid	oil + air
Max. operating pressure	10 bars
Operating temperature	0 to +60 °C
Mounting position	any

Electrical data

Rated voltage U_N	24 V DC ¹⁾
Operating range U_B	20 to 30.5 V DC
Max. power consumption I_E	40 mA
Type of enclosure	IP54
Outputs	pnp type <i>closes when oil streaks detected, opens when there are none</i>

Color coding with standard sensor cables:

brown (BN)	+ 24 V
blue (BU)	GND
black (BK)	make contact
white (WH)	break contact

¹⁾ Protective measure to be taken for operation in conformity with "Functional Extra-Low Voltage with Safety Separation" (PELV = Protective Extra-Low Voltage)

Accessories:

Connection cable with straight cable socket, 4-pole type, length 5 m, order No. DS-E.U2
Socket, 90° angled, order No. 179-990-372

Order No.	Plastic tubing \varnothing D	Flow rate
GS4011-S20	4	120 – 600

Important product usage information

All products from SKF may be used only for their intended purpose as described in this brochure and in any instructions. If operating instructions are supplied with the products, they must be read and followed.

Not all lubricants are suitable for use in centralized lubrication systems.

SKF does offer an inspection service to test customer supplied lubricant to determine if it can be used in a centralized system. SKF lubrication systems or their components are not approved for use with gases, liquefied gases, pressurized gases in solution and fluids with a vapor pressure exceeding normal atmospheric pressure (1013 mbars) by more than 0.5 bar at their maximum permissible temperature.

Hazardous materials of any kind, especially the materials classified as hazardous by European Community Directive EC 67/548/EEC, Article 2, Par. 2, may only be used to fill SKF centralized lubrication systems and components and delivered and/or distributed with the same after consulting with and receiving written approval from SKF.
